Volume Three

[PubMed: 29216666]17.El Hajj MS, Jaam MJ, Awaisu A. 2018 Oct 27;392(10157):1530-1540. 2019 Jan;102(1):3-19. 2018 Nov 01;3(11):1113-1118. Cardiac troponin measurement and interpretation in the diagnosis of acute myocardial infarction in the emergency department: a consensus statement. Those who do not undergo any revascularization will have a poorer outcome compared to patients who undergo revascularization. Res Social Adm Pharm. Contributed by U.S. Department of Health and Human Services Office on Women's Health An ECG showing pardee waves indicating acute myocardial infarction in the inferior leads II, III and aVF with reciprocal changes in the anterolateral leads. 2018 Aug;17(6):535-542. [From atherosclerosis to atherothrombosis : from a silent chronic pathology to an acute critical event]. In NSTEMI patients with refractory ischemia or ischemia with hemodynamic or electrical instability, PCI should be performed emergently Before discharge for acute MI, patients may routinely be given aspirin, high-dose statin, beta-blocker, and/or ACE-inhibitor. If PCI is contemplated, it should be done within 12 hours. If fibrinolytic therapy is considered, it should be done within 120 minutes. Other causes of chest pain can be: Stress - one frequent symptom of stress is the tightening of the chest Indigestion - spicy foods can cause mirror heart attack symptoms Lung problems - lung problems, such as asthma, can display themselves in the chest Abdominal Pain Whether it is from eating too much or too much of the wrong food, everyone gets a stomach ache from time-to-time. Int J Gen Med. Because many patients die before even reaching the hospital, the key is to educate the patient on symptoms and early arrival to the emergency department. The pharmacist, nurse practitioner, and primary care providers should educate patients on how to take nitroglycerin, and if there is no relief after three doses, then 911 should be called. At triage, the nurse should immediately communicate with the interprofessional team as time to reperfusion is limited. Modifiable risk factors include cigarette smoking, exercise, hypertension, obesity, cholesterol, LDL, and triglyceride levels. Contributed by Wikimedia Commons (CC by 4.0) Heart attack (myocardial infarction) warning signs in women. Rev Med Liege. 2018 Nov 07;39(42):3810-3820. Acute myocardial infarction can be divided into two categories, non-ST-segment elevation MI (NSTEMI) and ST-segment elevation MI (STEMI). Recent studies have found that diaphoresis and bilateral arm radiating pain most often are associated with myocardial infarction in men. Aside from small children, other possible causes of pain in your neck are: Muscle Strain - sitting hunched over your laptops or phones all the time can result in muscle strain from overuse Injuries - such as whiplash after a car accident Herniated Discs - like the back, herniated discs can occur in the neck Pelvic Pain Pelvic pain is most commonly found in women, though it can affect men, as well. When present, findings of ST-elevations greater than 2 mm in two contiguous leads on ECG (inferior: leads II, III, aVF; septal equal V1, V2; anterior: V3, V4; lateral: I, aVL, V5, V6) are indicative of an ST-elevation myocardial infarction. Readmission is common in about 50% of patients within the first 12 months after the initial MI. After stabilization, patients need thorough education by the nurse on the reduction of risk factors for coronary artery disease. [PMC free article: PMC6139477] [PubMed: 30179153]14.Adamski P, Adamska U, Ostrowska M, Navarese EP, Kubica J. Percutaneous coronary intervention can be done within 48 hours of admission and may lead to improved in-hospital mortality and decreased length of stay. 2019 Jun;12(6):993-1003. Before PCI, patients should receive dual antiplatelet agents, including intravenous heparin infusion as well as an adenosine diphosphate inhibitor receptor (P2Y2 inhibitor), most commonly ticagrelor. No patient should be prematurely discharged because complications of an MI can occur up to a week after an MI. [PMC free article: PMC6718753] [PubMed: 30257551] However, cardiac markers are not elevated. [1] [2] [3] An MI results in irreversible damage to the heart muscle due to a lack of oxygen. [Update ESC-Guideline 2017: Dual Antiplatelet Therapy]. Modifiable risk factors account for 90% (men) and 94% (female) of myocardial infarctions. As atherosclerosis is the predominant cause of acute myocardial infarction, risk-factors for atherosclerotic disease are often mitigated in the prevention of disease. [PubMed: 29448818]16.Schwaab B. Implementing myocardial infarction systems of care in low/middle-income countries. 2018 May;73(5-6):224-228. Cardiac Troponin - diagnostic problems and impact on cardiovascular disease. [PMC free article: PMC6547246] [PubMed: 30031700]19.Alquézar-Arbé A, Sanchis J, Guillón E, Bardaji A, Miró O, Ordóñez-Llanos J. 2019 Jun;14(6):507-520. CC-BY/coffee/pixabay Pain is something everyone has dealt with in their lives. Women often have atypical symptoms such as abdominal pain or dizziness and may present without chest pain at all. Dtsch Med Wochenschr. 2019 Sep;34(5):1040-1049. Another 5%-10% of patients will die within the first 12 months after their myocardial infarction. [PubMed: 30269080]2.Barbert C, van den Hondel KE. Often, there are ST depressions that are visualized in opposite anatomical regions of the myocardium. ECG diagnosis of STEMI can be difficult, particularly in patients with a left bundle branch block and pacemakers. [PubMed: 30196932]12.Larson EA, German DM, Shatzel J, DeLoughery TG. The HEART score has been validated and popularized. Ann Med. [PMC free article: PMC6220126] [PubMed: 30239711]7.Deng D, Liu L, Xu G, Gan J, Shen Y, Shi Y, Zhu R, Lin Y. Blinded outcomes and angina assessment of coronary bioresorbable scaffolds: 30-day and 1-year results from the ABSORB IV randomised trial. [PubMed: 30260119]10.Perera M, Aggarwal L, Scott IA, Logan B. Nerve pain happens when the nerves send incorrect pain signals to the brain. 2018 Aug;22(48):1-76. Associated symptoms include: Lightheadedness Anxiety Cough Choking sensation Diaphoresis Wheezing Irregular heart rate Physical exam, most importantly, should note vital signs and patient's appearance, including diaphoresis, as well as lung findings, and cardiac auscultation. Heart rate may reveal tachycardia, atrial fibrillation or ventricular arrhythmia. Unequal pulses if the patient has an aortic dissection Blood pressure is usually high, but hypotension if the patient is in shock Tachypnea and fever are not uncommon Neck veins may be distended indicating right ventricular failure Heart: lateral displacement of apical impulse, soft S1, palpable S4, new mitral regurgitation murmur. [Cardiac Rehabilitation]. ECG without acute changes or any abnormalities is common in NSTEMI. There are diagnostic guidelines that can assist the practitioner in determining whether further testing is useful in identifying patients with NSTEMI. In contrast, age, sex, and family history are non-modifiable risk factors for atherosclerosis. [6] [7] The history of and physical exam is often inconsistent when evaluating for acute myocardial infarction. In addition, an MI can lead to a number of serious complications. Health Technol Assess. Sometimes the pain receptors overlap, making it difficult to pinpoint the exact location of the issue. Patients with typical chest pain should be investigated for NSTEMI with subtle abnormalities on ECG, including ST-depressions and T wave changes. 2019 Jan;105(1):20-26. Besides a nurse practitioner, the social worker should be involved to facilitate home care, cardiac rehab, and the need for any support services while at home. Forensic Sci Int. Here are 10 common pains and their causes. Joint Pain Joints connect the bones in the body and are used so frequently and unconsciously that you don't even notice until it hurts. From acute (short-lived) to chronic (frequent and recurring.) pain occurs when the pain receptors in our bodies are triggered and send a message along the spinal cord to be received by the brain. 2018 Apr;57(2):117-126. Some of the causes of back pain are: Slipped/Herniated Discs - occurs when the discs between vertebrae rupture and irritate the surrounding nerves Muscle pain - caused by over-using the back muscles or repetitive heavy lifting Arthritis - Arthritis is most often linked to arms or hips, but it can affect the back, too Head Pain Head pain is one of the most common pains. JAMA Cardiol. 2018 Aug;143(15):1090-1093. [PubMed: 30265127]14.Massberg S, Polzin A. [PubMed: 30266412]19.Lopes RD, de Barros E Silva PGM, de Andrade Jesuino I, Santucci EV, Barbosa LM, Damiani LP, Nakagawa Santos RH, Laranjeira LN, Dall Orto FTC, Beraldo de Andrade P, de Castro Bienert IR, Alexander JH, Granger CB, Berwanger O, Eur Heart J. Some of the most frequent causes of pelvic pain are: Endometriosis - a painful condition that occurs when lining typically found inside the uterus grows on the outside of the uterus Ovarian Cysts - fluid-filled sacs that grow on the ovaries Irritable Bowel Syndrome - affecting male and women, IBS results in frequent diarrhea and stomach pain typically after eating certain foods or drinking dairy products Fibromyalgia Fibromyalgia is a musculoskeletal disorder that affects millions of people. However, frequent and unrelenting pain can be caused by: Pancreatitis - a sudden inflammation of the pancreas Appendicitis - rupturing or inflammation of the appendix Gallstones - stones that block the bile duct Foot Pain Humans are bipeds, meaning we walk upright on two feet. More than 100 billion, to be precise. 2018 Aug 01;122(3):374-380. The prevalence of the disease approaches three million people worldwide, with more than one million deaths in the United States annually. Hiding your pain doesn't make you a martyr: Managing in-hospital quality improvement: An importance-performance analysis to set priorities for ST-elevation myocardial infarction care. The asterisk(\*) also indicates left ventricular hypertrophy. Eur J Haematol. Some common nerve pains are: Shingles - a viral infection that causes a painful rash Phantom Limb - a phenomenon that causes pain where an amputated limb was Chest Pain Thanks in part to the overdrastic television trope of clutching one's chest and falling to the floor, chest pain is not always the sign of a heart attack. Parenteral anticoagulation, in addition to antiplatelet therapy, is recommended for all patients. Nursing Management Always make sure the patient has a large-bore IV Initiate treatment for acute MI Administer morphine for pain Start aspirin and nitroglycerin (0.4 mg sublingual) Provide oxygen if pulse oximetry is less than 94% at room air Ensure patient seen by a cardiologist Monitor vitals, daily weight, and urine output Administer heparin as ordered for STEMI If the patient has cardiac catheterization, check groin for hematoma and feel distal leg pulses When To Seek Help Loss of distal leg pulses (think emboli or low blood pressure) If a sudden change in mental status Continuing oxygen desaturation Tachycardia or arrhythmias Sudden onset of a loud murmur (think new-onset mitral regurgitation or ventricular rupture) Outcome Identification Improved tissue perfusion Able to regain function as before Monitoring Oxygenation-pulse oximetry The intensity of chest pain Auscultate chest for rales and new murmurs Acute myocardial infarction is managed by an interprofessional team that is solely dedicated to heart disease. [Level 5] Outcomes Acute myocardial infarction continues to have high mortality out of the hospital. Data indicate that at least one-third of patients die before coming to the hospital, and another 40%-50% are dead upon arrival. No, that wasn't a typo. [PubMed: 30203452]13.Bath PM, Woodhouse LJ, Appleton JP, Beridze M, Christensen H, Dineen RA, Flaherty K, Duley L, England TJ, Harvard D, Heptinstall S, James M, Kasonde C, Krishnan K, Markus HS, Montgomery AA, Pocock S, Randall M, Ranta A, Robinson TG, Scutt P, Venables GS, Sprigg N. The best prognosis is in patients with early and successful reperfusion and preserved left ventricular function. [17] [18] [19] [Level 2] Health Teaching and Health Promotion Eat healthy, low salt diet Maintain healthy body weight Become physically active, enrol in cardiac rehabilitation Control blood pressure, blood sugars and lipids Risk Management do not disregard chest pain- call clinician If vital signs abnormal, refer patient ASAP to cardiologist If laboratory parameters abnormal, consult with physician right away Discharge Planning Ambulate and become physically active Fake medications as prescribed Follow up in clinic as scheduled The earlier an MI is treated, the better the prognosis. Furthermore, the patient should have intravenous access and oxygen supplementation if oxygen saturation is less than 91%. [PMC free article: PMC6119561] [PubMed: 30182001]8.Haig C, Carrick D, Carberry J, Mangion K, Maznyczka A, Wetherall K, McEntegart M, Petrie MC, Eteiba H, Lindsay M, Hood S, Watkins S, Davie A, Mahrous A, Mordi I, Ahmed N, Teng Yue May V, Ford I, Radjenovic A, Welsh P, Sattar N, Oldroyd KG, Berry C. The earlier the treatment (less than 6 hours from symptom onset), the better the prognosis. An MI is diagnosed when two of the following criteria are met: Symptoms of ischemia New ST-segment changes or a left bundle branch block (LBBB) Presence of pathological Q waves on the ECG Imaging study showing new regional wall motion abnormality Presence of an intracoronary thrombus at autopsy or angiography Nursing Diagnosis Risk for decreased cardiac output Risk for ineffective tissue perfusion Risk for excess fluid volume The etiology of acute myocardial infarction is decreased coronary blood flow. An MI may lead to impairment in diastolic and systolic function and make the patient prone to arrhythmias. Triple versus guideline antiplatelet therapy to prevent recurrence after acute ischaemic stroke or transient ischaemic attack: the TARDIS RCT. The patient should be educated on the importance of medications to lower blood pressure and blood cholesterol. [14] [15] [16] [Level 2] Pharmacists review prescribed medications, check for interactions, and provide patient education about the importance of compliance. 2018 Dec;5(06):655-665. Korean J Intern Med. The available oxygen supply cannot meet oxygen demand, resulting in cardiac ischemia. Epidemiology and Serum Metabolic Characteristics of Acute Myocardial Infarction Patients in Chest Pain Centers. [PubMed: 30132731]15.Ayeleis D, Seys D, Sinnavee PR, Claeys MJ, Gevaert S, Schoors D, Sermeus W, Panella M, Bruyneel L, Vanhaecht K. 2018 Oct;30(5):336-349. Nurses should be vigilant about the potentially life-threatening complications and communicate with the team if there are abnormal clinical signs or laboratory parameters. Hence, nurses should be vigilant about MI symptoms and signs. Reduce risk factors to improve outcomes. Review Questions Specimen showing myofibrillar infarction in the left ventricle and the interventricular septum. Isolated ST-elevations in aVR are indicative of left main coronary artery occlusion in the appropriate clinical setting. Atherosclerotic plaques classically rupture and lead to thrombosis, contributing to acutely decreased blood flow in the coronary. Effect of pharmacist care on medication adherence and cardiovascular outcomes among patients post-acute coronary syndrome: A systematic review. Received care compared to ADP-guided care of patients admitted to hospital with chest pain of possible cardiac origin. Some of the more serious causes of foot pain are: Plantar Fasciitis - small tears in the heel muscles frequently seen in athletes Blisters - walking too much and wearing new shoes can cause blisters Stress Fractures - tiny cracks in the bones Neck Pain The neck is responsible for holding up your entire head. Expert Opin Pharmacother. The pharmacist should address and provide education concerning appropriate medication dosing and discuss potential side effects. After discharge, the patient needs to enter a cardiac rehabilitation program, eat a healthy diet, discontinue smoking, abstain from alcohol, reduce body weight, and lower cholesterol and blood glucose levels. Everywhere Cognitive Functions - memory and focus can be affected Fatigue - the constant pain can cause an endless cycle of insomnia and fatigue Depression - it can be difficult to live a "normal" life (work, have social interactions) and that can lead to depression Most people think pain is just a normal, typical thing to deal with every day, but for frequent and explained pain can be the sign of a more serious problem. 2018 Jul;47(7):1017-1029. 2018;11:345-351. It can be frustrating and depressing to deal with because the cause can be difficult to define. Swollen and sore feet are normal everyday pains, to an extent. The cardiologist may consider thrombolysis or PCI, depending on the duration of symptoms and contraindications. Other etiologies of decreased oxygenation/myocardial ischemia include coronary artery embolism, which accounts for 2.9% of patients, cocaine-induced ischemia, coronary dissection, and coronary vasospasm. [4] [5] Among patients suffering from acute myocardial infarction, 70% of fatal events are due to occlusion from atherosclerotic plaques. [PMC free article: PMC6128279] [PubMed: 30214268]11.Riley RF, Miller CD, Russell GB, Soliman ET, Hiestand BC, Herrington DM, Mahler SA. 2018 Nov;292:27-38. [PMC free article: PMC6583055] [PubMed: 30264159]20.Choi AR, Jeong MH, Hong YJ, Sohn SJ, Kook HY, Sim DS, Ahn YK, Lee KH, Cho JY, Kim YJ, Cho MC, Kim CJ, other Korea Acute Myocardial Infarction Registry Investigators. [PubMed: 28641999]18.Stone GW, Ellis SG, Gori T, Metzger DC, Stein B, Erickson M, Torzewski J, Williams J, Lawson W, Broderick TM, Kabour A, Piegari G, Cavendish J, Bertolo B, Choi JW, Marx SO, Généreux P, Kereiakes DJ, ABSORB IV Investigators. The reason back pain is so common is that the important role the spine plays in the body's stability and mobility. Evaluating current and emerging antithrombotic therapy currently available for the treatment of acute coronary syndrome in geriatric populations. The use of cardiac troponin T (cTnT) in the postmortem diagnosis of acute myocardial infarction and sudden cardiac death: A systematic review. Emergencias. Opioids may be used for pain control in addition to sublingual nitroglycerin if the blood pressure is adequate. [11] [12] [13] Treatment for STEMI includes immediate reperfusion. Lancet. Wellens noted deeply biphasic T waves in V2, V3, and found they are often predictive of an impending proximal left anterior descending artery occlusion, which may lead to devastating anterior wall myocardial infarction. Patients that present with myocardial infarction may not have diagnostic ST-elevation ECG abnormalities. MORE FROM QUESTIONS ANSWERED.NET Learning Outcome Describe the presentation of acute myocardial infarction (MI) Recall the nursing diagnosis of acute MI Summarize the treatment of acute MI Describe ways to reduce the risk of coronary artery disease Acute myocardial infarction is one of the leading causes of death in the developed world. Serial ECGs can be helpful here as well to look for dynamic changes. Head pain is usually caused by: Headaches - two of the most diagnosed types are migraines and tension Tumors - brain tumors are rare but head pain is one of the first symptoms Nerve Pain There are over a billion nerves in the body. Modes and timing of death in 66,252 patients with non-ST-segment elevation acute coronary syndromes enrolled in 14 TIMI trials. The pain is typically referred to as a "fibro-flare" and can include: Widespread Pain - it hurts. Unstable angina is similar to NSTEMI. The history should focus on the onset, quality, and associated symptoms. The most obvious and inevitable cause of joint pain is age, but other causes can include: Arthritis - pain in the joints due to inflammation Osteoarthritis - degeneration of the joints due to age, more commonly in women Sprains - strains to the joints Back Pain It is reported that about 80% of adults will experience back pain. [PubMed: 30269044]3.Alaour B, Liew F, Kaier TE. All patients need ICU monitoring. Anticoagulation in the cardiac patient: A concise review. Preference is for emergent percutaneous coronary intervention (PCI). It utilizes clinician's suspicion, patient risk factors, ECG diagnostics, and troponin level to determine the "risk level" of the patient. Laboratory Features Cardiac troponins should be the only marker ordered CBC Lipid profile Renal function Metabolic panel All patients with STEMI and NSTEMI require immediately chewed aspirin 160 mg to 325 mg. Heart. Furthermore, glycoprotein IIb/IIIa inhibitor or direct thrombin inhibitor may be given at the time of percutaneous intervention. If percutaneous intervention is unavailable within 90 minutes of the diagnosis of STEMI, reperfusion should be attempted with an intravenous thrombolytic agent. NSTEMI in a stable asymptomatic patient may not benefit from emergent percutaneous coronary intervention and should be managed medically with antiplatelet agents. [PubMed: 29926559]6.Berg DD, Wiviott SD, Braunwald E, Gao J, Im K, Kashani A, Gibson CM, Cannon CP, Morrow DA, Bhatt DL, Mega JL, O'Donoghue ML, Antman EM, Newby LK, Sabatine MS, Giugliano RP. It just makes you in pain. JACC Cardiovasc Imaging. Sgarbosa described criteria that can assist the physician or practitioner in diagnosing STEMI in these patients. Am J Cardiol. Eur J Cardiovasc Nurs. 2018 Sep;19(13):1415-1425. The overall prognosis depends on the ejection fraction, age, and other associated comorbidity. Timing of Loading Dose of Atorvastatin in Patients Undergoing Percutaneous Coronary Intervention for Acute Coronary Syndromes: Insights From the SECURE-PCI Randomized Clinical Trial. Contributed by Wikimedia Commons, Glenarson (Public Domain-Self) Transesophageal echocardiography, Thrombo embolism, Pulmonary artery, Pulmonary Embolism, Thromboembolic, Right Pulmonary artery, TE, RPA, Acute ECG segment elevation mimicking myocardial infarction in a patient with pulmonary embolism. Decreased coronary blood flow is multifactorial. For example, a person having a heart attack might feel pain in their arm, leg or neck instead of their chest. For example, peaked T-waves on ECG, known as "hyperacute T waves," often indicate early ischemia and will progress to ST elevation. Iran J Public Health. The area on the body where the pain is felt isn't necessarily indicative of the true cause of the pain. Given the poor sensitivity of ECG for STEMI, troponins are almost universally used for patients with a suspicious clinical history. The cause of the disorder isn't fully understood yet. The key is to reperfuse the heart and restore blood flow. A loud holosystolic murmur radiating to the sternum may be indicative of ventricular septal rupture. Wheezing and rales are common if the patient has developed pulmonary edema Extremities may show edema or cyanosis and will be cold Early and rapid ECG testing should be employed in all patients presenting with chest pain. All of these presentations should prompt ECG testing, as well. [8] [9] [10] The ECG is highly specific for MI (95% to 97%), yet not sensitive (approximately 30%). It's no wonder that it hurts sometimes. Current Smoking and Prognosis After Acute ST-Segment Elevation Myocardial Infarction: New Pathophysiological Insights. Besides the cardiologist, the team usually consists of a cardiac surgeon, an interventional cardiologist, intensivist, cardiac rehabilitation specialist, critical care or cardiology nurses, and physical therapists. Elderly patients more often have shortness of breath as their presenting symptom for myocardial infarction. Contribute by (more...)1.Nascimento BR, Brant LCC, Marino BCA, Passaglia LG, Ribeiro ALP. Clinical characteristics and outcomes in acute myocardial infarction patients with versus without any cardiovascular risk factors. Usefulness of Serial 12-Lead Electrocardiograms in Predicting 30-Day Outcomes in Patients With Undifferentiated Chest Pain (the ASAP CATH Study). Rehabilitation (Stuttg). Right-sided, posterior lead placement, and repeat ECG testing can increase ECG sensitivity. [PubMed: 30060279]5.Scheen AJ.

26-03-2010 · Nanda approved nursing diagnoses 2003-2004 ... Instead of a problem list or list of nursing and medical diagnosis, a focus column is used that incorporates many aspects of patient and patient care. ... A: Medicated with Isordil 5mg. SL. S: Lampe, RN 12:00 am Chest Pain R: resting in bed. "nabawan na sakin ng dibidib ko. Rating of 2." S ... Anesthesia is a combination of the endpoints (discussed above) that are reached by drugs acting on different but overlapping sites in the central nervous system. General anesthesia (as opposed to sedation or regional anesthesia) has three main goals: lack of movement (), unconsciousness, and blunting of the stress response. In the early days of anesthesia, anesthetics could reliably ... Open Resources for Nursing (Open RN) ... chest pain, abdominal pain, anorexia, numbness of extremities, muscle wasting, heart failure, and shock in severe cases. B2 (Riboflavin) ... can increase metabolism and require an increased amount of nutrients. However, cancer treatment, such as radiation and chemotherapy, often causes nausea, vomiting ...
